

■ AgroTrace (FarmConnect) — Master Guide

Complete Technical Documentation & Exhaustive File-by-File System Architecture

Version: 2.4.0 Production | **Monorepo:** Turborepo | **Backend:** Node/Express & Python/FastAPI | **Frontend:** React 18 & Flutter | **Blockchain:** Solidity / Polygon Amoy | **Database:** PostgreSQL (Neon)

1. Executive Overview & System Design

AgroTrace (branded as FarmConnect) is an enterprise-grade agricultural intelligence, food supply chain traceability, and farm operations platform. The project connects smallholder and commercial farmers, logistics distributors, retailers, consumers, and agricultural certifiers. It integrates multi-source sensor and satellite telemetry (NASA POWER weather, Sentinel-2 NDVI vegetative indices), machine learning algorithms (LightGBM yield predictions, Random Forest crop advisors, MobileNetV2 leaf pathology vision), and immutable decentralized provenance via Ethereum/Polygon smart contracts (Traceability.sol & PredictionProvenance.sol).

Root Configuration & Orchestration Files

Root-level manifests, build tooling, deployment definitions, and process orchestrators.

File / Module Path	Technical Purpose & Architectural Role
package.json	Root Turborepo workspace configuration defining shared scripts for `build`, `dev`, `lint`, `test`, `docker:up`, and child workspace packages (`apps/*`, `packages/*`, `services/*`).
render.yaml	Cloud Infrastructure as Code (IaC) configuration for deploying Backend Express API, FastAPI AI Service, and PostgreSQL databases on Render.
start.bat	Windows Batch script orchestrating the simultaneous startup of backend services, frontend Vite server, and Python AI microservices.
start.ps1	PowerShell orchestration script providing automated environment validation, dependency verification, and multi-service process spawning.
.env.example	Master environment configuration template documenting database connection strings, JWT secrets, blockchain RPC endpoints, and API keys.
.gitignore / .gitattributes	Version control filters excluding node_modules, build artifacts, virtual environments, and defining line-ending normalizations.
.renderignore	Build exclusion rules for Render cloud deployment to optimize slug sizes and speed up container assembly.

Agricultural Datasets (Dataset/)

Curated agricultural datasets powering ML model training, benchmarking, and fertilizer recommendation engines.

File / Module Path	Technical Purpose & Architectural Role
Dataset/Crop_recommendation.csv	2,200 agricultural samples containing N-P-K soil ratios, temperature, humidity, pH, and rainfall mapped to 22 optimal crop labels (Rice, Maize, Cotton, Chickpea, etc.).
Dataset/Fertilizer Prediction.csv	Empirical soil nutrient and environmental dataset mapping soil type, crop type, moisture, and NPK deficiencies to 7 standard fertilizer formulations (Urea, DAP, 14-35-14, 28-28, etc.).
Dataset/crop_yield.csv	Comprehensive 50,000+ row dataset spanning Indian districts with historical area, yield (kg/ha), fertilizer requirements, temperature, humidity, rainfall, and solar radiation.

Dataset/ICRISAT-District Level Data.csv	Longitudinal dataset (1966-2017) from ICRISAT containing multi-decade district-level crop statistics, yields, and irrigation patterns across India.
--	---

Backend Gateway Application (apps/backend/src/)

Node.js, Express, and TypeScript REST API handling authentication, business logic, ORM access, QR code generation, and blockchain relays.

File / Module Path	Technical Purpose & Architectural Role
src/server.ts	Main server bootstrap file initializing Express, CORS security headers, Rate Limiting, Helmet middleware, JSON body parsers, cookie parsers, and mounting 18 REST router modules.
src/config/index.ts	Centralized configuration module parsing and validating environment variables (PORT, DATABASE_URL, JWT_SECRET, AI_SERVICE_URL, RPC_URL).
src/database/prisma.ts	Singleton instance of PrismaClient providing pooled relational database connectivity to PostgreSQL/Neon.
src/middleware/auth.ts	JWT authentication and verification middleware extracting Bearer tokens and attaching the authenticated user payload to Express requests.
src/middleware/authorize.ts	Role-Based Access Control (RBAC) guard enforcing granular permissions for FARMER, DISTRIBUTOR, CONSUMER, and ADMIN user roles.
src/middleware/errorHandler.ts	Global centralized error handling middleware formatting operational errors, Prisma database exceptions, and validation failures into standard JSON responses.
src/middleware/rateLimiter.ts	DDoS and brute-force protection middleware applying IP-based request windows (100 requests per 15 min).
src/middleware/audit.ts	Audit logging middleware capturing mutating API actions with timestamp, user ID, IP address, and request payload snapshots.
src/validators/schemas.ts	Zod and Joi schema definitions ensuring runtime validation of incoming registration, login, crop, farm, order, and sensor payloads.
src/routes/auth.routes.ts	Endpoints for user registration, credential authentication, refresh token rotation, and authenticated profile retrieval.
src/routes/admin.routes.ts	Protected administrative routes for system-wide user management, farm audits, system analytics, and verification workflow approvals.
src/routes/farm.routes.ts	CRUD endpoints for farm profile registration, geo-coordinate updates, USDA/organic certification management, and farmer farm lookups.
src/routes/field.routes.ts	Endpoints managing individual agricultural plots/fields belonging to farms, tracking soil types and plot dimensions.
src/routes/crop.routes.ts	Crop lifecycle routes recording planting dates, crop varieties, growth stage transitions, and final harvest yield logging.
src/routes/prediction.routes.ts	Yield prediction orchestration calling Python ML services with field weather/NDVI telemetry and anchoring hashes to smart contracts.
src/routes/recommendation.routes.ts	Crop recommendation routes taking current field soil snapshots and returning ranked crop suitability lists.
src/routes/weather.routes.ts	IoT and weather ingestion routes executing backfills from NASA POWER API and storing daily weather snapshots.
src/routes/ndvi.routes.ts	Satellite vegetation monitoring routes ingesting NDVI values and triggering automated fusion re-forecasting if vegetative stress is detected.
src/routes/product.routes.ts	Marketplace product catalog routes managing SKUs, pricing, stock levels, organic certifications, and batch linkage.

src/routes/cart.routes.ts	Consumer shopping cart routes supporting item additions, quantity updates, and cart price aggregations.
src/routes/order.routes.ts	Order checkout, status lifecycle transitions (PENDING -> SHIPPED -> DELIVERED), and cryptographic batch assignment.
src/routes/shipment.routes.ts	Distributor logistics routes tracking carrier assignments, dispatch timestamps, waypoint scans, and delivery confirmations.
src/routes/supplyChain.routes.ts	Supply chain milestone logging routes creating immutable events (HARVESTED, PACKAGED, SHIPPED) and generating chronological trace trees.
src/routes/qrRoutes.ts	High-density QR code generation and decoding routes converting batch identifiers into cryptographically verifiable consumer trace URLs.
src/routes/verify.routes.ts	Public product verification endpoints returning complete seed-to-shelf provenance, farm credentials, and blockchain transaction hashes.
src/routes/chat.routes.ts	Agricultural advisor chat proxy forwarding conversational queries to the RAG knowledge retrieval and recommendation engine.
src/routes/market.routes.ts	Real-time agricultural commodity market price endpoints fetching Agmarknet mandi rates.
src/services/provenance.service.ts	Ethers.js integration computing deterministic SHA-256 state hashes and executing on-chain transactions to record provenance.
src/services/qrService.ts	QR generation service encoding verification URLs with high error correction (Level H) into base64 data URIs.
src/services/agmarknet.service.ts	External data ingestion service scraping and querying live Indian government Agmarknet commodity market price feeds.
src/services/chatService.ts	Conversational AI orchestration handling pattern matching, intent routing, and agricultural advisory generation.
src/services/mlService.ts	HTTP client wrapper for communicating with the FastAPI ML Inference microservice with automatic retries and fail-closed safety.
src/jobs/priceSnapshotJob.ts	Background cron job periodically collecting and caching market commodity prices for offline analytics.
src/scripts/seed.ts	Database seeding script populating demo users (Admin, Farmer, Distributor, Consumer), certified farms, crops, and products.

Python ML Inference Service (apps/ml-inference/)

FastAPI microservice executing high-performance machine learning inference, computer vision, and RAG search.

File / Module Path	Technical Purpose & Architectural Role
main.py	FastAPI application entrypoint configuring CORS, request logging, lifespan events, and mounting feature routers for yield, recommendation, disease, and RAG.
requirements.txt	Python dependency manifest specifying FastAPI, Uvicorn, Scikit-Learn, LightGBM, Pandas, NumPy, Pillow, Transformers, and PyTorch.
routers/prediction.py	REST API endpoints for real-time crop yield predictions and multi-factor regression analysis.
routers/recommendation.py	REST API endpoints for soil-climate NPK crop suitability classification.
routers/disease.py	REST API endpoints for leaf pathology image upload and automated plant disease diagnosis.
routers/health.py	Health check and model telemetry endpoint reporting model versions, memory usage, and GPU availability.
routers/rag.py	Endpoints for semantic search over agricultural knowledge base documents using TF-IDF and cosine similarity.

services/yield_service.py	LightGBM yield prediction engine with biological clamping rules for seedling NDVI normalization and out-of-distribution detection.
services/recommend_service.py	Random Forest crop recommendation service predicting top-3 crops with confidence probability distributions.
services/disease_service.py	Plant disease diagnostic engine running MobileNetV2 CNN weights alongside deterministic Excess Green (2G-R-B) and chlorosis lesion masks.
services/ndvi_service.py	Vegetative health index scoring service computing stress levels, anomaly flags, and threshold alerts.
services/rag_service.py	Retrieval-Augmented Generation service indexing government MSP guidelines, PMKSY subsidy schemes, and pest protocols with TF-IDF vectorization.
scripts/generate_synthetic_data.py	Simulation generator creating realistic agricultural training sets with soil moisture, temperature, and yield curves.
scripts/train_crop_rec.py	Model training pipeline fitting Random Forest classifiers on Crop_recommendation.csv and exporting pickled artifacts.

Standalone AI Microservice (services/ai-service/)

Dedicated standalone crop prediction service with historical weather backfill and satellite NDVI evaluation.

File / Module Path	Technical Purpose & Architectural Role
main.py	FastAPI microservice endpoint providing modular endpoints for yield prediction, crop advisories, and historical NASA POWER backfills.
models/yield_predictor.py	Random Forest Regressor implementation evaluating 9 environmental features (N, P, K, pH, rainfall, temperature, humidity, area).
models/crop_advisor.py	Crop selection advisor mapping agronomic conditions to optimal seed varieties with regional calibration.
models/fertilizer_advisor.py	Fertilizer dosage advisor calculating exact N-P-K nutrient deficits and recommending urea/DAP applications.
models/disease_predictor.py	Computer vision model wrapper classifying 38 PlantVillage crop disease categories.
services/weather_backfill.py	NASA POWER API connector fetching historical precipitation, solar radiation, and temperatures by GPS coordinates.
services/satellite_ndvi.py	Sentinel-2 satellite imagery processor extracting average NDVI reflectance values over farm polygon boundaries.
scripts/fetch_historical_weather.py	Batch ETL script ingesting and caching multi-year weather matrices for Indian agricultural districts.

Frontend Web Application (apps/web/src/)

React 18, TypeScript, Tailwind CSS, and Vite web dashboard providing responsive interfaces for all user roles.

File / Module Path	Technical Purpose & Architectural Role
src/main.tsx	React application entrypoint mounting the DOM root with Router, AuthProvider, and ThemeProvider context wrappers.
src/App.tsx	Top-level application router configuring public, protected, and role-based routes with lazy-loaded code splitting.
src/AdminRoutes.tsx	Dedicated route sub-tree wrapping administrative management screens inside the persistent AdminLayout.

src/pages/Home.tsx	Landing page showcasing platform value propositions, real-time statistics, and quick-access traceability scanners.
src/pages/Login.tsx / Register.tsx	Authentication pages featuring role selection tabs, JWT credential validation, and animated form states.
src/pages/Dashboard.tsx	Farmer dashboard displaying active crops, farm weather cards, soil sensor feeds, and yield forecast widgets.
src/pages/AdminDashboard.tsx	High-level administrative portal displaying platform KPIs, user growth curves, revenue metrics, and pending farm verifications.
src/pages/UsersManagement.tsx	Admin user management table with real-time text search, role filtering, status toggling, and user creation modals.
src/pages/FarmsManagement.tsx	Visual farm registry displaying farm cards, geolocation coordinates, crop listings, and verification badges.
src/pages/ProductsManagement.tsx	Inventory and product catalog management interface tracking batch numbers, prices, and stock statuses.
src/pages/Analytics.tsx	Interactive analytics suite with Recharts visualizations for monthly revenue, crop production volumes, and user activity.
src/pages/Verifications.tsx	Workflow interface allowing administrators to review farm audit documents and issue cryptographic verification status.
src/pages/Marketplace.tsx	Consumer e-commerce marketplace featuring certified organic produce cards, price badges, and direct add-to-cart.
src/pages/Traceability.tsx	Flagship consumer traceability page displaying interactive seed-to-shelf timelines, farmer profiles, and on-chain TX links.
src/pages/SupplyChainView.tsx	Interactive visual supply chain map showing custody transfers from harvest field to distribution warehouse to retail store.
src/pages/Chatbot.tsx	AI Agricultural Assistant interface featuring quick prompt chips, markdown responses, and contextual crop guidance.
src/pages/DiseaseDetection.tsx	Leaf image upload portal with live camera capture, disease classification output, and treatment recommendations.
src/pages/WeatherIntelligence.tsx	Geospatial weather dashboard displaying 7-day forecasts, rainfall charts, and climate alert indicators.
src/contexts/AuthContext.tsx	React Context managing global user state, token persistence in localStorage/cookies, and login/logout handlers.
src/contexts/CartContext.tsx	React Context maintaining consumer shopping cart state, quantity modifications, and checkout preparation.
src/components/AdminLayout.tsx	Sidebar layout shell for admin pages with collapsible navigation, user profile dropdowns, and responsive mobile drawers.
src/components/BlockchainBadge.tsx	UI pill component displaying blockchain anchoring status (PENDING, CONFIRMED, SIMULATED) with links to block explorers.
src/components/QRScannerModal.tsx	Camera-driven QR code scanner component decoding physical product labels in real time.
src/components/AnalyticsChart.tsx	Reusable Recharts component rendering responsive area, line, and bar charts with custom tooltips.
src/components/CropRecommendationCard.tsx	Card component displaying AI-recommended crops with match confidence percentages and required soil parameters.
src/services/api.ts	Configured Axios instance with automated Authorization header injection and centralized 401 redirect interceptors.

Mobile Flutter Application (apps/mobile/)

Cross-platform mobile client designed for field operations, farmer registrations, and mobile QR scanning.

File / Module Path	Technical Purpose & Architectural Role
pubspec.yaml	Flutter package specification defining mobile dependencies (http, qr_code_scanner, provider, flutter_bloc).
lib/main.dart	Flutter application entrypoint initializing theme data, routing table, and authentication state providers.
lib/screens/login_screen.dart	Mobile login and registration screen with role-based navigation.
lib/screens/home_screen.dart	Mobile dashboard displaying quick farm overview, crop statuses, and shortcut buttons for field capture.
lib/screens/farm_register_screen.dart	Mobile form allowing farmers to capture GPS coordinates using device location sensors and register new plots.
lib/screens/qr_scanner_screen.dart	High-performance camera scanner scanning product QR codes and navigating to mobile traceability views.
lib/services/auth_service.dart	Mobile HTTP service handling JWT authentication tokens and secure storage.

Blockchain & Decentralized Provenance (blockchain/ & services/blockchain/)

Solidity smart contracts, Hardhat compilation toolchain, and deployment scripts for tamper-proof provenance logging.

File / Module Path	Technical Purpose & Architectural Role
blockchain/contracts/Traceability.sol	Core Solidity smart contract (`pragma solidity ^0.8.24`) recording supply chain events (batchId, eventType, metadataHash, timestamp, recordedBy) with role-restricted access control.
services/blockchain/contracts/PredictionProvenance.sol	Smart contract recording cryptographic hashes of AI predictions to guarantee historical predictions cannot be retroactively altered.
services/blockchain/contracts/SupplyChain.sol	Comprehensive ERC-compatible supply chain contract tracking multi-party custody transfers and payment escrow milestones.
blockchain/hardhat.config.js	Hardhat configuration specifying Solidity compiler optimizations and network RPC endpoints (Localhost, Polygon Amoy Testnet).
blockchain/scripts/deploy.js	Deployment script deploying Traceability.sol to the target EVM network and writing contract addresses to contract-address.json.
blockchain/contract-address.json	Auto-generated JSON file storing the deployed smart contract address consumed by backend Ethers.js services.
services/blockchain/test/Traceability.test.ts	Automated smart contract test suite verifying event recording, authorization checks, and historical queries.

Database & ORM Layer (packages/prisma/)

Prisma schema definition, migrations, and database seed scripts providing complete data modeling.

File / Module Path	Technical Purpose & Architectural Role
packages/prisma/schema.prisma	Master Prisma schema modeling 20+ relational entities: User, Farm, Field, Crop, SoilReading, WeatherSnapshot, NDVIReading, YieldPrediction, CropRecommendation, Product, Order, Shipment, SupplyChainEvent, and ProvenanceRecord.
packages/prisma/seed.ts	Comprehensive database seeding script creating verified initial entities, demo credentials, realistic crop cycles, and historical sensor readings.

<code>packages/prisma/migrations/</code>	Sequential SQL migration directory containing versioned database schema transformations.
--	--

Comprehensive Documentation (Documentation/ & docs/)

Extensive architectural blueprints, API specifications, hackathon presentation guides, and deployment manuals.

File / Module Path	Technical Purpose & Architectural Role
<code>Documentation/COMPLETE_PROJECT_DOCUMENTATION.md</code>	Master developer documentation containing full feature checklists, demo scripts, interview preparation, and architectural overviews.
<code>Documentation/API_ARCHITECTURE.md</code>	Detailed REST API architecture specification outlining request/response flows, security layers, and data models.
<code>Documentation/API_DOCS_COMPLETE.md</code>	Exhaustive API endpoint reference detailing request parameters, status codes, and sample payloads for all 18 route groups.
<code>Documentation/ARCHITECTURE_GUIDE.md</code>	Multi-tier system architecture guide detailing microservice interactions, data pipelines, and blockchain integration.
<code>Documentation/AUTH_SYSTEM_COMPLETE.md</code>	Security specification documenting the 4-role RBAC implementation, JWT token lifecycle, and route guards.
<code>Documentation/HACKATHON_PRESENTATION.md</code>	Slide-by-slide presentation deck outline and live demo choreography for competitions and evaluations.
<code>docs/ARCHITECTURE.md</code>	Concise technical architecture reference for onboarding and quick reviews.

12. System Integration Summary & Verification

Every component in the AgroTrace repository operates in seamless harmony. Telemetry ingested from IoT sensors and satellite feeds directly calibrates machine learning inference pipelines. Predictions and supply chain custody transfers are cryptographically hashed and anchored on-chain to provide immutable provenance. The web and mobile applications provide role-tailored interfaces allowing farmers to optimize yields, administrators to oversee verifications, and consumers to independently verify the complete farm-to-table journey through high-density QR codes.
